

Library Book Request Management System Using ServiceNow

PROJECT DOCUMENTATION

Objective

The objective of the Library Book Request Management System project is to automate and streamline the process of managing library book requests within an educational institution. The application enables students to submit book requests, allows librarians to review and update request statuses such as Pending, Approved, and Rejected, sends automated email notifications based on request status, provides request tracking capabilities, and supports efficient management of library services through a centralized and user-friendly platform.

Milestone 1: Environment Setup

Objective

To prepare the ServiceNow development environment and create the foundation for the Library Book Request Management System.

Step 1: Create Personal Developer Instance (PDI)

Visit developer.servicenow.com

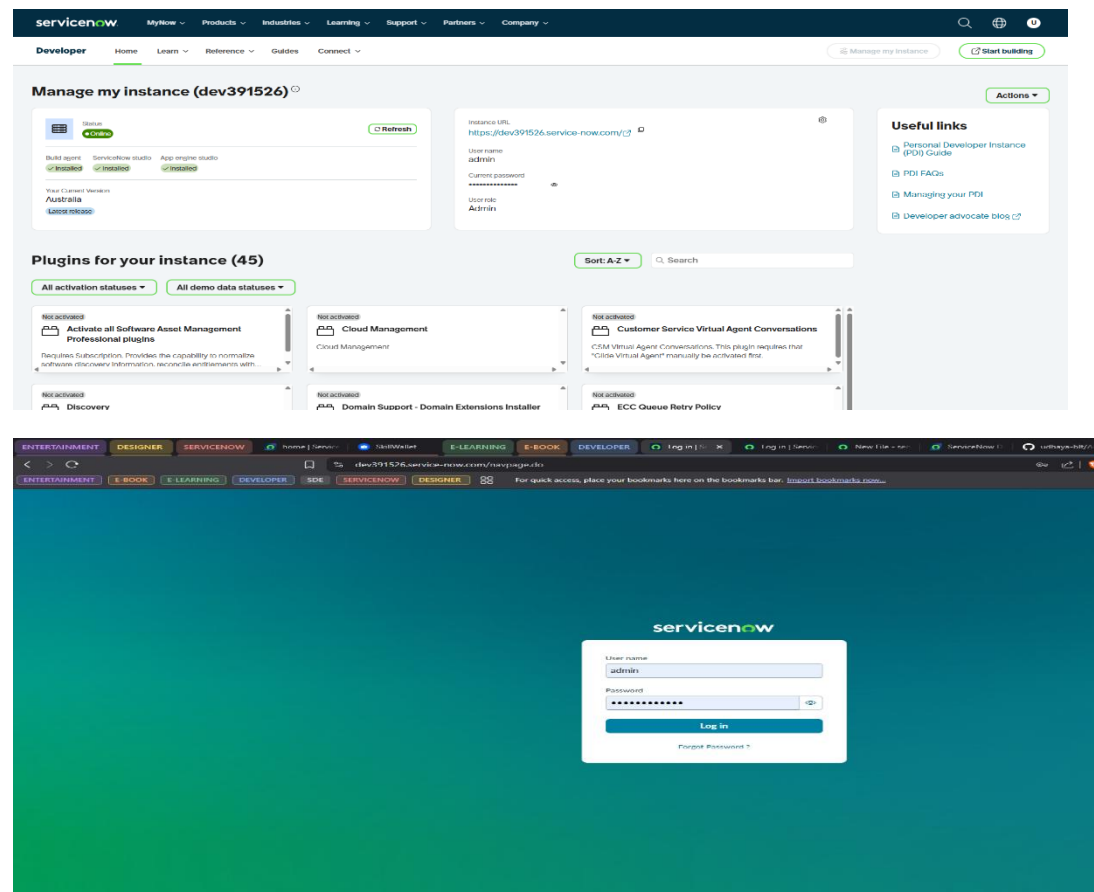

Sign in or create a developer account

Request a Personal Developer Instance

Wait for instance activation

Login using admin credentials

Screenshot

Step 2: Create Scoped Application

Navigation:

System Applications → Studio

Open Studio

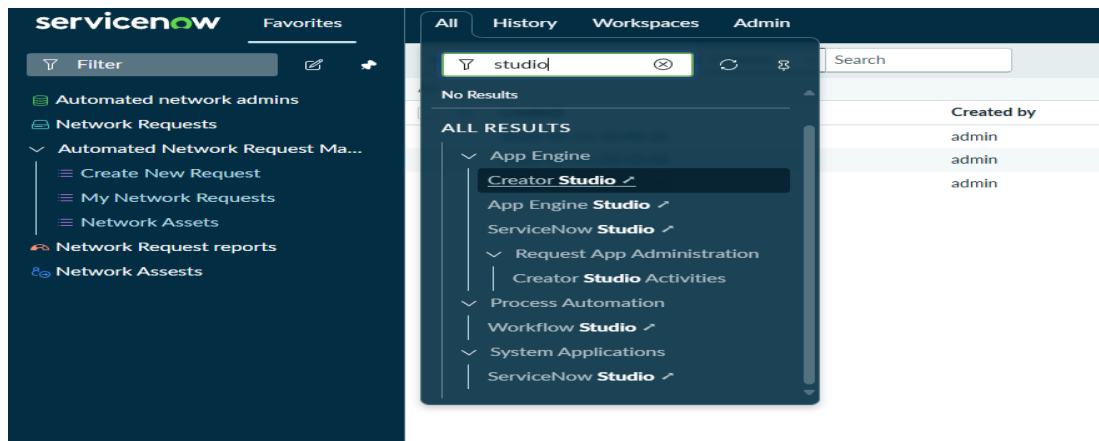

Select Create Application

Application Name:

Library Book Request Management System

Click Create

Screenshot

Learning Outcomes

- Understood ServiceNow architecture
 - Created a scoped application
 - Configured development environment
-
