

Milestone 6: Dashboard and Reporting

Objective

Provide visual insights into library book requests and enable librarians to monitor request trends through reports and dashboards.

Step 1: Configure Dashboard

Self-Service → Dashboards

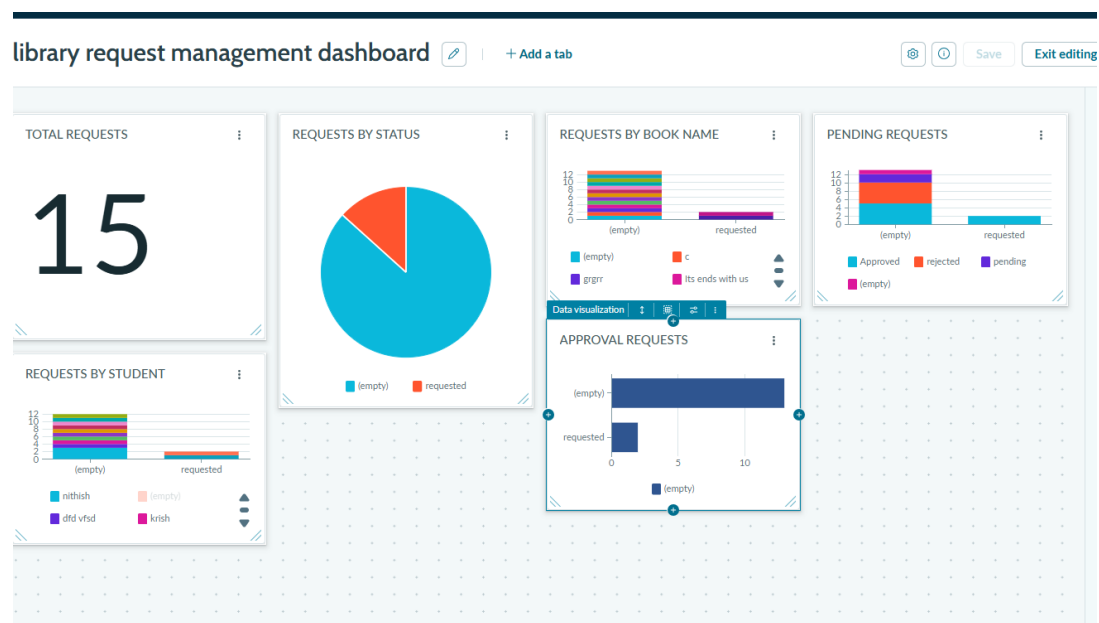

Dashboard Name:

Library Request Management Dashboard

Components Added:

- Total Requests
- Pending Requests
- Approved Requests
- Rejected Requests
- Request Status Distribution Chart

Screenshot

Achievements:

- Online request submission.
- Automated approval workflow.
- Real-time status tracking.
- Email notifications.
- Centralized request management.

Conclusion

The Library Book Request Management System successfully automates the lifecycle of library book requests using the ServiceNow platform. The project demonstrates key ServiceNow concepts including scoped application development, custom tables, client scripts, Flow Designer automation, notifications, and request tracking. The solution improves efficiency, reduces manual effort, and provides better visibility into the library request management process.

Future Enhancements

- Library Dashboard and Reporting
- Book Availability Tracking
- Return Date Management
- Multi-Level Approval Process
- Service Portal Integration
- Mobile Accessibility
- Advanced Analytics Dashboard
- AI-Based Book Recommendations
- Integration with Library Inventory Systems
