

Milestone 3: Business Logic and Validation

Objective

Implement automation and validation for request processing.

Step 1: Configure Form Layout

Navigation:

Open Library Request Form

Right Click → Configure → Form Layout

Arrange fields logically.

Screenshot

The screenshot displays the ServiceNow Studio interface for configuring the 'library request' form. The left sidebar shows the 'App details' pane with a tree view of the application structure. The main workspace is divided into two panes: 'Fields (7)' and 'Components (2)'. The 'Fields' pane lists various fields including 'Created', 'Created by', 'Updated', 'Updated by', 'Updates', 'approval', and 'approval status'. The 'Components' pane shows the 'library request' form layout. The form fields are arranged in a logical sequence: 'Number', 'Book name', 'Request number', 'Issue Date', 'Student id', 'Student name', 'student email', and 'status'. The 'Issue Date' field is highlighted with a red border and a warning message: 'The date must match format: yyyy-MM-dd'. The 'Status' field is a dropdown menu with the value 'pending'.

Step 2: Create Client Script for Issue Date Validation

Purpose:

Prevent users from selecting past dates.

Validation:

Issue Date cannot be earlier than the current date.

Screenshot :

The screenshot shows the 'Client script' editor for a table named 'library request [x_1877521_librar...]'. The script is titled 'Validate issue date' and is set to run on the 'onSubmit' event. The application is 'Library Book Request System'. The script code is as follows:

```
1 function onSubmit() {  
2  
3   var issueDate = g_form.getValue('u_issue_date');  
4  
5   var today = new Date();  
6   var selectedDate = new Date(issueDate);  
7  
8   today.setHours(0,0,0,0);  
9  
10  if(selectedDate < today) {  
11    alert('Issue Date cannot be in the past');  
12    return false;  
13  }  
14  
15  return true;  
16 }
```

The 'Isolate script' checkbox is checked.

Step 3: Auto Generate Request Number

Purpose:

Automatically generate unique request numbers.

Examples:

LBR01001

LBR01002

LBR01003

Learning Outcomes

- Implemented client-side validation
- Automated request numbering
- Improved data accuracy
- Enhanced user experience
